Introduction and background

The *Massachusetts Vehicle Census* (MVC) is the first state-level dataset in the nation that joins vehicle-level odometer readings with vehicle attribute and registration transaction histories.

This powerful resource allows policymakers, researchers, and other stakeholders understand state and local trends in vehicle usage and ownership. Questions that this dataset can answer about actively registered vehicles in the state include:

- Are electric vehicles driven more or less than gas-powered vehicles?
- How many vehicles were added (or subtracted) from my city or town between 2021 and 2022?
- What is the difference in the number of passenger vehicles versus commercially registered vehicles?

Since the first iteration of the MVC was first produced by the Metropolitan Area Planning Council (MAPC) in 2014, the data has been used in several projects and research studies. However, the adoption of a new RMV data management platform known as ATLAS in 2018, and the significant economic and policy emphasis on sustainable transportation technologies – especially electric and zero-emission vehicles – renewed the urgency to expand and update this dataset. The development of this product responds to the legislative requirements defined in Chapter 179 of the Acts of 2022, and is a significant accomplishment for MassDOT and our partners.

8. Regional Transportation Plan Survey Results Update

Ms. Estrela-Pedro presented an overview of the Moving Forward 2050 public survey results, which was part of the community outreach efforts of this year’s Regional Transportation Plan (RTP). The survey was distributed to town halls, libraries, and councils on aging across all SRPEDD communities. It was promoted at SRPEDD meetings, community events, and on SRPEDD’s social media. It received 976 responses, 42% of which were individuals over the age of 65 and 32% of which were 45-64 years old. 92% of survey respondents reported using their own vehicle in a typical week. When asked about their perfect transportation system, 54% of respondents included “reliable, convenient and affordable transit” in their top 3 choices, 48 % of respondents included less congested roads, 46% included more alternative transportation options, and 46% included safer transportation in their top 3 choices. When asked what they would spend transportation funds on, 81% of respondents stated fixing local roads, and 41% stated adding

and fixing bike lanes and sidewalks. When asked what would convince them to use bus transportation, respondents provided answers such as bus stops closer to home, better bus stop accessibility, more reliable and frequent service, free fares, more destinations along the routes, an inability to drive, and greater clarity about services and how to use them. Survey responses showed that during the Covid-19 pandemic 62% of respondents drove less, 20% walked or bicycled more, and 27% did not experience changes in travel patterns. Ms. Estrela-Pedro stated that a complete overview of survey results will be published in the draft RTP, which will be presented to the SMMPO in August.
